

Parcel Safe has a line of steel pedestals that allows the home or business owner to install a stand-alone Parcel Safe unit almost anywhere that can support the unit and area traffic. Parcel Safe units come in a pass-through or vault configuration. While a vaulted Parcel Safe unit can be installed in a wall with the vault component visible from the inside of a closet or room, in most cases the vaulted units will sit on a pedestal where it is most advantageous to the home or business owner.

All pedestals are powder coated flat black, 31" tall and have the same 12" base plate with mounting holes at the bottom. The pedestals also have a 12" top plate with the same hole pattern and size necessary to connect the pedestal to the Parcel Safe vaults.
